## SOLDER SLEEVE DEVICES

Solder sleeves are unique devices designed to solder ground leads to braided screened cables, and join cables together. The solder sleeves are a length of clear heat shrink tubing, with a specially developed low temperature pre-fluxed solder ring in the centre. The ends of the tubing have rings of a thermoplastic sealant. With the simple application of a heat gun, these devices quickly solder, environmentally seal and insulate wire connections. Ask your **CARROLL** representative for a demonstration.
