WATERPROOF PRE-INSULATED TERMINALS

The **CARROLL** unique range of sealed, waterproof crimp terminals are the perfect solution for single wire terminations in corrosive or marine environments. The tin plated copper or brass terminals feature a tough, heat shrinkable, adhesive lined, colour coded insulation. After completion of the standard crimping process, the terminal insulation is then heated with a heat gun or small gas torch. Within seconds, the terminal insulation then shrinks and the internal adhesive sealant melts and flows to provide a permanent seal and bond to the wire insulation.

PRE-INSULATED END SLEEVE (BOOT LACE) FERRULES

Designed to be crimped onto the end of flexible wires and cables before insertion into rail mounted or screw terminals, to provide protection to the fragile wire strands against bending back and breakage. Featuring a funnel entry, the fine electrolytic copper tubes are tin plated for superior conductivity and corrosion resistance. Pre-insulated ferrules are colour coded by size for easy product selection.

PRE-INSULATED END SLEEVE (BOOT LACE) FERRULES - REEL

Note: Three standards of colour coding exist. This colour coding standard offered by **CARROLL** is the most widely recognised and accepted.
