

SAFE-T-PULL SIGN

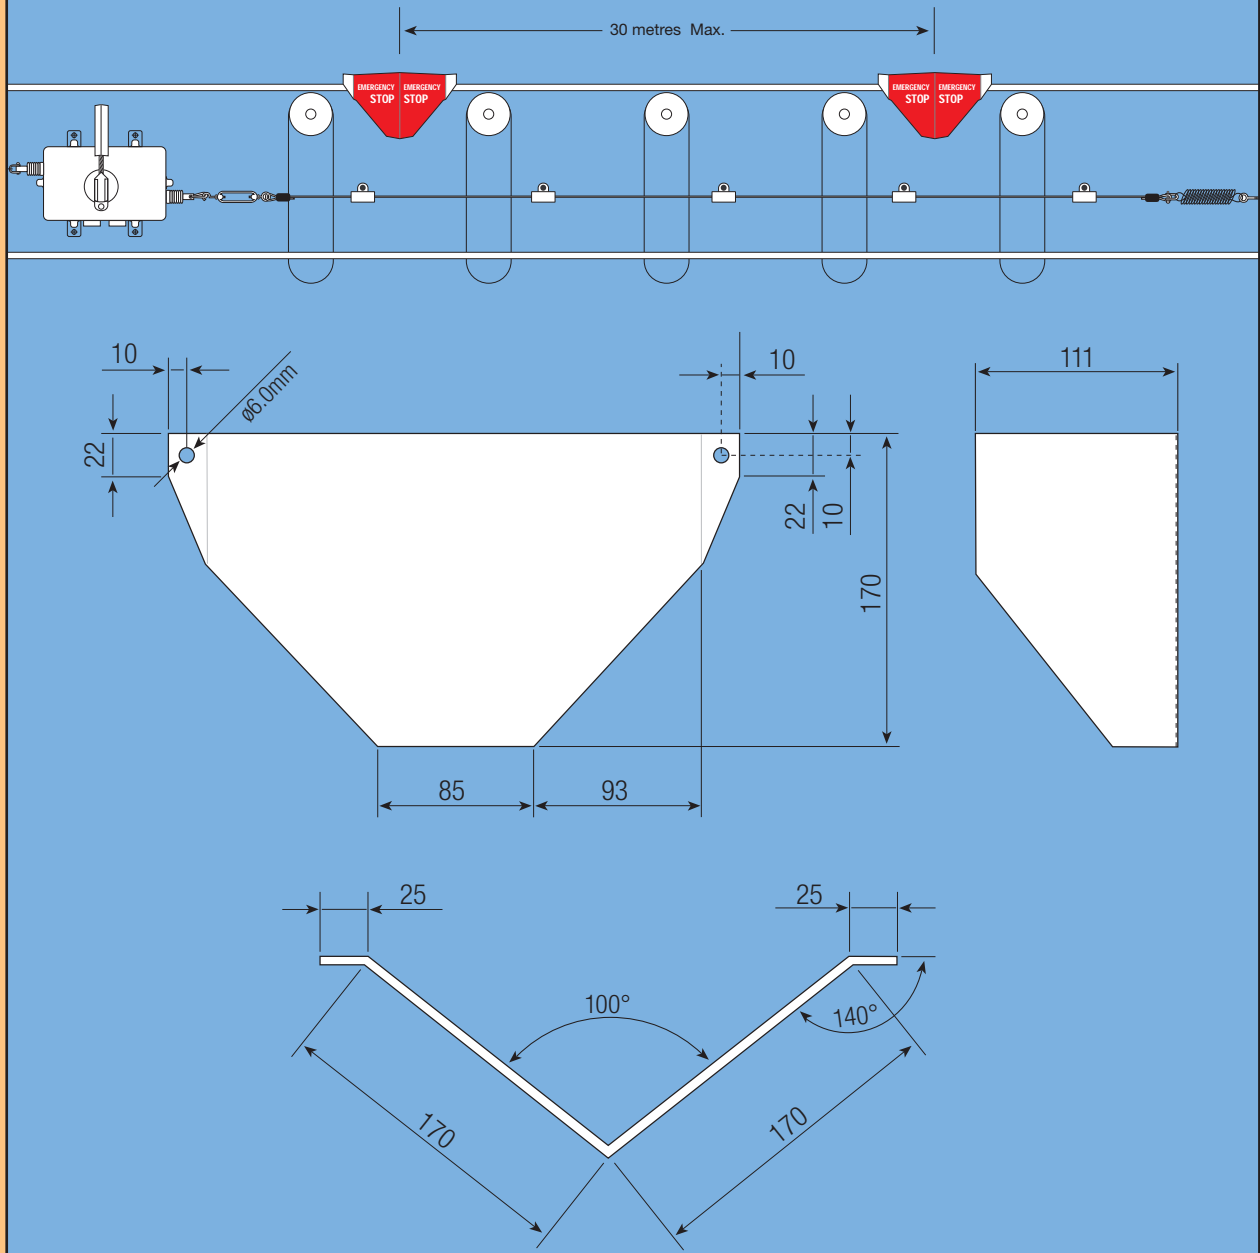

The **SAFE-T-PULL SIGN** is a highly reflective emergency stop sign for conveyor lanyard switches and pull wires. It is manufactured from a high grade 3M reflective product which has a 10 year guarantee and is mounted to a specially designed mounting bracket which is angled to give the operator a view of the sign at all angles. This is noted in the OHS Act, Division 3, 4.29 (k) and (m), suitably identified and prominent. The mounting bracket is made from 1.2mm 304 Stainless Steel. With two 6mm mounting holes the bracket is simple and easy to install on existing or new installations. The angle is also designed so that when mounted as per the Australian Standards AS4024.3610, they can be seen at every 15m point. The Australian Standards AS4024.3610 Clause 2.10.6.1 state that, signs **should** be provided at the head, tail and transfer points and no more than 30m intervals where a pull wire is situated along a conveyor.
